A visit from Peking Tsinghua University

Peking Tsinghua University Power Electronics Laboratory visited companies in Japan and Myway Plus Corporation. Our CEO, Mr Yang Zhongqing welcomed them and gave an introduction of our development instrumentations and offered a lab tour.

Tsinghua University is a world-famous university. The selected students are from three departments of electricity, electronics and automation. They came to Japan with the Professor for investigation and exchange of Power Electronics companies. Prior to our company visit, they have visited famous Japanese electric machine manufacturers, device makers, educational institutions and others. During Myway's visit, a team of students from Tokyo Institute of Technology have also joined in the seminar.

Some feedback from the students:

- The strengths and features of semiconductor industry chains between Japan and China are studied
- Each company has not only focused on current R&D, they have also planned the future developments
- Impressed by R&D back 20-30 years ago which served as the building block for current technology

Feedback about Myway Plus Corporation:

"I felt like a family member at Myway Plus as compared to major companies."

"I was satisfied that I could see product demonstration, laboratory and production site."

Through such opportunities in the future, Myway Plus would serve as an opportunity for the exchange and revitalization of the industry. Myway Plus will continue to accelerate the development of power electronics technology and strive for social contribution.
